ILVES

Shoes and boots adapted for Scandinavian winters with cold, snow and ice.

Ilves boots - warmly lined, with fold-out spikes and grippy outsoles

Ilves boots are lined with lambswool or sheepskin to keep your feet warm — ideal for both town and country.
Equipped with fold-out spikes, they're perfect for winter walks, offering extra grip when needed. Simply fold the spikes in or out as required.

Designed in Sweden and manufactured in Portugal, Ilves boots feature an outsole that resists ground cold and provides reliable traction even without the spikes deployed.

OC ANTI-SLIP SYSTEM

The OC system is a modern anti-slip solution with built-in spikes underneath the shoe. The spikes are easily folded in or out with a special key. In snowy, slushy, icy or slippery conditions, the OC system offers an immediate extra good and stable grip. The outsole is made by the leading Italian sole manufacturer Alpi. The sole is light and stable and withstands ground cold.

PRODUCTION AND SUSTAINABILITY

Manufacturing in Portugal

Ilves boots and shoes are made at a family-owned factory with around 100 employees and a long-standing tradition of shoemaking. Equipped with state-of-the-art technologies, the factory ensures high quality throughout the production process, which takes place in modern facilities where craftsmanship is combined with mechanized processes. Today, the factory is run by the third generation of the family, and there is a strong focus on reducing environmental impact. Solar panels have been installed, and all waste is sorted, recycled, or responsibly managed.

The factory complies with both national and European environmental regulations and has undergone a SMETA audit, a globally recognized standard that ensures working conditions, environmental practices, and ethical guidelines are upheld throughout production and the supply chain.

Materials with care

The leather used in Ilves boots and shoes comes from Portugal and Italy. Both the leather and the sheepskin lining are certified by the Leather Working Group (LWG), an environmental certification for tanneries that ensures suppliers follow strict guidelines for sustainable tanning. This includes using vegetable tanning methods instead of chrome. The sheepskin and wool used in the inner lining are mulesing-free.

A number of Ilves boots are equipped with a water-resistant membrane that is breathable and moisture-wicking. The membrane is made from 100% PU (polyurethane), free from PFAS and other environmentally harmful substances.
