CAMPER

Camper is a contemporary Spanish footwear brand dedicated to creating unique seasonal collections that push boundaries by connecting design-driven innovation and better natural materials with decades of shoemaking heritage.

With four generations and more than 140 years dedicated to the industry, Camper remains committed to upholding the same traditional values and pioneer spirit that have defined it since its inception. Each season, dozens of original designs are developed with an expert team of designers and technicians at their head office in Mallorca, breaking molds and defying odds while maintaining the brand’s signature aesthetic.

Located in the heart of the Mediterranean, Camper strives to reduce its impact across all areas of its business. By combining innovative natural materials with the latest footwear technology, Camper creates timeless, long-lasting designs that are focused on reducing their environmental impact from the outset.

Camper continues to be an independent family-run business, offering products online, through a select distribution network, and nearly 300 Camper stores in over 40 countries.

FALL/WINTER 2022

The Camper Fall/Winter 2022 Collection brings together two distinct worlds: the traditional office and the great outdoors.

This season, a range of autumn and winter styles bridge the gap between nature and the cubicle, blending strong shapes, bold colors, and more responsible natural materials that help us minimize our impact.

For F/W 22, clean looks with rich textures and exaggerated details combine with technical outdoor styles and reimagined Camper Icons to present a collection that embraces the quality, design, and craftsmanship of the brand.

RUNNER K21

K100841-008 / K201438-008

Inspired by our first-ever sneaker, Runner K21 offers an updated silhouette with a bold retro profile and an innovative outsole made with 30% bio-based sugarcane.

The F/W 2022 collection presents this refreshed classic in a range of new styles, including options made with plant-based textiles, recycled plastics, bamboo linings, and non-dyed leather.

BRUTUS TRECK

K300435-001 / K400646-001

The newest member of the Brutus family was made for the outdoors. Upgraded with a Michelin outsole for enhanced performance, Brutus Trek reimagines our legendary boot in a wide range of styles and colors for F/W 2022.

Featuring options with waxed leather and all-weather technology from GORE-TEX and PrimaLoft®, Brutus Trek is 360° stitched for added durability and protection in even the harshest conditions

PEU STADIUM

K300425-004 / K400624-004

Based on the same ergonomic shape as our iconic Peu, Peu Stadium embraces the simple and unpretentious spirit of its predecessor with a minimal aesthetic and more responsible materials.

Upgraded throughout for the F/W 2022 collection, Peu Stadium features a 51% recycled outsole and a range of options with more responsible materials like responsibly raised leather, non-dyed leather, bamboo, recycled cotton, and recycled synthetics.

BONNIE

K400631-003

A timeless cowboy boot style is reinterpreted for a new generation. Taking its name from the notorious duo, Bonnie features bold volume and a contemporary toe shape in a range of S/S 2022 proposals.

A cushioned footbed, a durable sole made from 20% recycled rubber, and soft fabric linings that are recycled and chrome-free make this all-new line a smart choice for those who demand versatility.

SUSTAINABILITY: LEATHER

Responsible Leather

Responsibly raised leather promotes sustainability and transparency throughout the supply chain by aiming to ensure better use of natural resources, hold strict animal welfare standards, reduce emissions, enforce traceability of animals' origin, and increase transparency through third-party verification.

CERTIFICATIONS

The Leather Working Group (LWG) is responsible for the world's premiere leather manufacturing certification. Established with the aim to reduce the impact of the leather industry, the organization assesses and certifies leather tanneries against a stringent set of environmental criteria. Since 2013, Camper has been a member of the LWG and supports the group's effort to source better leather that is traceable and more environmentally friendly.

The Global Recycled Standard (GRS) is a voluntary product standard for tracking and verifying the content of recycled materials in a final product. The standard applies to the full supply chain and addresses traceability, environmental principles, social requirements, chemical content and labeling. GRS covers processing, manufacturing, packaging, labeling, trading and distribution of all products made with a minimum of 20% recycled material. It also sets requirements for third-party certification of recycled content, chain of custody, social and environmental practices, and chemical restrictions.

The goal of GRS is to provide brands with a tool for more accurate labeling, to encourage innovation in the use of reclaimed materials, to establish more transparency in the supply chain, and to provide better information to consumers.

As the original pioneers of forest certification, Forest Stewardship Council (FSC) has over 25 years of experience in sustainable forest management. They use their expertise to promote the responsible management of the world's forests, bringing together experts from the environmental, economic and social spheres.

FSC will promote environmentally appropriate, socially beneficial, and economically viable management of the world's forests. FSC is the leading catalyst and defining force for improved forest management and market transformation, shifting the global forest trend toward sustainable use, conservation, restoration, and respect for all.

KEY PARTNERS

Materials
Outsoles

The industry leader in weatherproof apparel technology, GORE-TEX offers innovative solutions for conquering the most unpredictable outdoor conditions. Meticulously tested to meet strict performance standards, each GORE-TEX product guarantees breathable comfort and unmatched waterproof protection, making it the natural choice for our footwear.

TENCEL™ Lyocell fibers originate from the renewable raw material wood. Aside from their strength, moisture absorption abilities and gentleness to skin, the fibers have excellent environmental credentials.

Harvested from certified and controlled sources that are FSC® or PEFC™ certified, these botanic fibers are manufactured using an environmentally responsible production method. The process recycles water, allowing a reduction of around 95% of water impact compared to conventional cotton.

A 100% plant based natural material that takes its origin from different decomposed organic plant matter. The production process is completely free of virgin plastic and it can be fully recyclable. The extra benefits of soil make it resistant, breathable and flexible. Plus the natural production process ensures skin gentleness and anti-irritation properties.

Originally developed to serve the needs of the United States Army, PrimaLoft® is a water repellent synthetic fiber that offers excellent comfort and warmth. Made of post-consumer recycled fibers sourced from plastic bottles, the extra soft material provides added breathability while keeping out the cold.

KEY PARTNERS: OUTSOLES

The lightness-oriented innovation goes hand in hand with the investments in sustainability: in-house manufacturing of eco-friendly machinery for the reusing of industrial waste as well as the implementation of photovoltaic systems in the corporate plants.

With regard to sustainability, one of the most interesting compounds is undoubtedly XL EXTRALIGHT® Sustainable+ and the new bio oriented sugarcane quality.

For over a century, Michelin has been trusted to provide innovative solutions to safety and performance, responsible for connecting man and earth under any climatic conditions. In a quest to redefine the industry standard for grip and durability, Michelin and Camper have teamed up to apply their unrivaled expertise and technological know-how to a new generation of innovative urban footwear.

First developed for mountaineering, Vibram® soles provide enhanced traction and a high degree of abrasion resistance thanks to a unique compound blending the springiness of foam with the grip and durability of rubber.
